Passport Toward Success: Description and Evaluation of a Program Designed to Help Children and Families Reconnect After a Military Deployment

**SUMMARY:** Children and adolescents of National Guard members who recently returned from deployment participated in the Passport Towards Success (PTS) program, which teaches youth strategies for effective coping, problem-solving, and emotional expression. Adolescents of deployed parents experienced a range of emotional and behavioral problems. Program participation provided new strategies to effectively communicate, manage negative emotions, and solve problems.

**KEY FINDINGS:**
- Adolescents reported numerous difficulties associated with a parent’s deployment and reunion.
- Most adolescent participants reported that they learned new strategies for relaxation, coping, problem-solving, and communication in the program.
- Adolescents who reported the most difficulties with a parent’s deployment described the most benefit from the PTS program.

**IMPLICATIONS FOR PROGRAMS:**
Programs could:
- Provide opportunities for youth to talk with similar-age peers about the challenges of deployment and reunion
- Incorporate activities designed to increase family resilience
- Disseminate information regarding common behavioral or emotional problems military parents may see throughout the deployment cycle

**IMPLICATIONS FOR POLICIES:**
Policies could:
- Support the expansion of programs to more communities to help prevent deployment-related negative outcomes for children in military families
- Recommend additional evaluation of these programs to target funding toward programs demonstrating superior effectiveness
- Continue to provide support for family reintegration programs

This product is the result of a partnership funded by the Department of Defense between the Office of Military Community and Family Policy and the USDA’s National Institute of Food and Agriculture through a grant/cooperative agreement with The University of Minnesota.

METHODS

- The PTS program was conducted at 10 reintegration events.
- Adolescents completed surveys evaluating positive and negative experiences related to a parent’s deployment, self-esteem, and a program evaluation measure.
- Parents completed surveys evaluating their child’s behavioral problems, pro-social behaviors, and family communication.

PARTICIPANTS

- One hundred sixty-one children (3-17 years) of Indiana National Guard members who recently returned from deployment participated in this study.
- Most analyses were limited to 63 adolescents (9-17 years) who completed surveys, 54% of whom were male.
- The average age of participants was 11.6 years.

LIMITATIONS

- Although the adolescents reported learning new strategies as a benefit of the program, analyses of the only measure included at both pre- and post-assessment (self-esteem) did not demonstrate any significant change.
- Data were obtained from only one parent, 40% of whom had been deployed and therefore, may not accurately represent children’s behaviors.
- The sample is small and homogenous, raising concerns about the generalizability of the findings.

AVENUES FOR FUTURE RESEARCH

Future research could:

- Include additional pre- and post-test measures to comprehensively evaluate the effectiveness of the program
- Utilize long-term follow up to assess maintenance of gains over time
- Develop content specific to the needs of 3-6 year old children and evaluate program effectiveness with this younger sample of military children

ASSESSING RESEARCH THAT WORKS

- Design: Appropriate Research Plan and Sample
- Methods: Appropriate Measurement and Analysis
- Limitations: Few
